## **Spoil removal**

The project is aiming to re-use 95% of clean spoil. Spoil that cannot be reused will be transported by heavy vehicles to spoil reuse and disposal sites, located up to 70 kilometres from the construction sites. This will decrease the use of local or residential streets to remove spoil and minimise possible safety impacts on pedestrians and road users.

Around 612,650 cubic metres of spoil will need to be moved from the Arncliffe construction site. Spoil will be stored on site and removed during standard construction hours. In the instances where we may need to remove spoil or take delivery of material that cannot be transported during standard construction hours, the community will be notified in advance.

We will aim to remove spoil outside peak times.

Once completed, land not required for motorway facilities will be returned to owners.

to minimise the volume of spoil generated by the project.

Of the spoil that is generated, a target of 95 per cent beneficial reuse of clean spoil has been set.

This reuse would either be within the project area or at other locations.

## F6 Extension Stage 1

Otherwise RMS will only disclose your personal information, without your consent, if authorised by the law. Your personal information will be held by RMS. You have the right to access and correct the information if you believe that it is incorrect.

The F6 Extension Stage 1 will deliver the missing link from Sydney's south to the wider Sydney motorway network, making journeys easier, faster and safer. It will remove more than 2,000 trucks a day from surface roads, and help return local streets to local communities.

The project will move onto the Marsh Street site after construction work on the New M5 has finished. Using this site will minimise impacts to the community and surrounding property and save time establishing a new site. The site will be used to support tunnelling activities, including spoil removal, storage and haulage.

Fact sheet November 2018

Easing

congestion

## **Key construction activities**

- Construction of an acoustic shed
- Tunnel excavation and other tunnelling work
- Stockpiling of spoil and spoil haulage
- Construction of an access point (decline) leading into the tunnels
- Construction of a substation and water treatment facility
- · Fit-out of a ventilation facility being constructed as part of the New M5 motorway project.

Tunnelling and spoil management will be carried out at this site 24 hours a day and seven days a week.

Table 1: Indicative construction timeline

Construction activity	Year	2020				20		
construction activity	Quarter	1	2	3	4	1	2	
Arncliffe construction site								
Site establishment								
Tunnelling works and spoil I								
Construction of Motorways Complex 1 (surface building								
Rehabilitation and landscap	oing							

### **Construction traffic**

Access to the Marsh Street site will be provided via traffic signals installed as part of the New M5 Motorway project. Access will allow for a left-in and right-in movements and left out only. No construction vehicle impacts are expected on

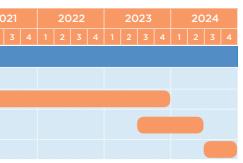

Indicative vehicle numbers Table 2:

Location	Daily vehicles (two-way)		AM peak hour (7-8am)				PM peak hour (5-6pm)			
	Heavy vehicles v	Light vehicles <sup>-</sup>	Heavy vehicles		Light vehicles		Heavy vehicles		Light vehicles	
			Arrive	Depart	Arrive	Depart	Arrive	Depart	Arrive	Depart
Arncliffe construction site	276	336	13	13	65	1	13	13	1	76

Construction activities and the site layout may be subject to further change through detailed design process.

#### **Potential construction impacts**

Should the project be approved the Minister's Conditions of Approval will outline mitigation measures for the construction of the project, including the requirement for the contractor to prepare a Construction and Environment Management Plan (CEMP). This plan will describe reasonable and practical mitigation measures that will be put in place to minimise potential impacts form the project on the local community and environment during construction.

- local roads with site access being directly to and from Marsh Street.
- The indicative vehicle numbers described in Table 2 represent vehicle movements during construction.
